Box III TEXT OF THE ABSTRACT (Continuation of item 5 of the first sheet)

Methods and apparatus are disclosed for leak testing the ventilation system (10) of an environmental enclosure using a gas that is naturally present in ambient air, such as nitrogen, oxygen, argon, or carbon dioxide, as a tracer gas. In one embodiment, a gas filter (16) capable of filtering all of the tracer gas from the air flowing through the filter (16) is installed in the ventilation system (10). Testing is performed by operating the ventilation system (10) to cause outside air to flow through the filter (16) and into the enclosure (12) so as to establish positive pressurization inside the enclosure(12). A gas monitor (24) placed inside the enclosure (12) is used to detect for the presence of leaks in the ventilation system (10) by monitoring the concentration of the tracer gas inside the enclosure (12).
